DETAILED ACTION

Allowable Subject Matter

Claims 3-4, 6-8, 13, 15, and 47-56 are allowed.

Claims 3-4, 6-8, 13, 15, and 47-56 are allowable over the prior art of record, none of the prior art whether together singularly or in combination to teach the claimed combination as recited. The closest reference "Optimization of DC Resistivity Data Acquisition: Real-Time Experimental Design and a New Multielectrode System", by Stummer et al. does not disclose or suggest the improvement of the instant application comprising a survey controller to automatically poll the survey probes to obtain respective identifiers and determine a relative order of the probes; each survey probe configured to disconnect a downstream neighbor survey probe and enter an idle state, report its unique identifier to the survey control if in the idle state and in response to a polling command from the survey probe, and change to a state other than the idle state after reporting its unique identifier as cited in independent claim 3; or automatically determine at least a relative ordering of the survey probes with respect to each other and to thereafter command individual ones of the survey probes based on the automatically determined relative ordering as cited in independent claim 47; or automatically determining a relative position of each of the survey probes as placed and commanding individual ones of the survey probes using the obtained unique identifiers and based on the determined relative positions thereof as cited in independent claim 51. Instead, Stummer et al. teach multielectrode recording system with built-in switch matrix allowing arbitrary pairs of electrodes to inject currents into the ground and arbitrary potential electrode configurations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
